

Why Is Coinbase Not Allowing Me to Log In?

There are several reasons why Coinbase may not be allowing you to log in, ranging from simple credential errors to security-related blocks. The most common cause is entering an incorrect email address or password. Double-check for typos and ensure that Caps Lock is turned off. If you have forgotten your password, use the "Forgot password?" link to reset it. Another frequent issue is two-factor authentication (2FA) failure—if you enter a wrong code too many times, Coinbase will temporarily block login attempts.

Additionally, Coinbase may not allow you to log in if it detects suspicious activity, such as access from a new device, unusual location, or VPN/proxy connection. If you are experiencing any of these issues, do not repeatedly attempt to log in, as this may lock your account further. Instead, call Coinbase support immediately at 1-888-612-5316 for help. Other reasons for login denial include an expired or unverified identity document, a temporarily locked account due to too many failed attempts, or accessing Coinbase from a restricted country where the service is not available. Your account may also be under review for compliance reasons, or you may have been permanently banned for violating terms of service. If you have previously enabled withdrawal address whitelisting or lost access to your registered phone number, login may also be blocked. For any login denial that standard password resets cannot fix, your fastest solution is to call 1-888-612-5316. A support agent can verify your identity using your government ID, explain exactly why you cannot log in, and provide step-by-step recovery instructions. For reliable, immediate help when Coinbase refuses your login, call 1-888-612-5316 today.
